Leader
🔗 https://pathmazing.com/

Just Works Development   September, 2020 - December, 2021
Front End Web Developer   Cambodia, Phnom Penh

Trend Micro Philippines   August 2018 - July 2019
L1 Threat Engineer   Manila, Philippines
🔗 https://www.trendmicro.com/en_us/business.html

Education

Benguet State University   June 2014 - June 2018
Information Technology   Bachelor of Science

Projects

Onflow Communication   April 2023 - Present
Creating the version 2 of the website
🔗 https://bas2-test.onflowcommunication.com/

Creating version 2 of a website involves enhancing design, functionality, and technology. Key areas include improving user experience, ensuring responsive design, optimizing performance, adding new features, updating branding, enhancing SEO, updating technology, and boosting security.

Vue js, quasar, css

Digital Economy Platform
Responsible for the whole project
🔗 https://www.dep.kh/

The website for the Department of Environment in Cambodia (dep.kh) provides detailed information about the department's mission, environmental policies, and regulatory frameworks. It also features sections on environmental conservation programs, sustainability initiatives, and the latest news regarding environmental protection efforts in Cambodia. Additionally, the site offers resources for both public and governmental users, including legal documentation, educational materials, and information on how to get involved with environmental projects.

Pathmazing
Transfer of Technology, Pathmazing website
🔗 https://pathmazing.com/

Transitioning a website's technology to Next.js from Laravel involves adopting a modern framework that supports both server-side rendering (SSR) and static site generation (SSG), which can significantly enhance the site's performance and SEO. Next.js is built on React, which means it leverages the existing ecosystem and components of React, but with added benefits such as automatic code splitting, optimized performance, and simplified page routing. Moving to Next.js can streamline development processes with features like API routes that simplify backend integration and built-in CSS support for styled-components. Overall, migrating to Next.js is a strategic decision aimed at making the website more efficient, scalable, and maintainable, while improving the user experience through faster load times and better handling of dynamic content.

Machfu
Responsible for the whole project

An Industrial Internet of Things (IIOT) portal for the oil and gas industry. The portal allows users to generate and modify configuration files for oil and gas pipeline management systems.

Pouk Mak
Continued the development

The first Cambodian messaging app is also dual languages (Khmer & English) and with many added features like social media, games, etc.

Weddily
Contributed on the fron-end development
🔗 https://weddily.com/

Weddily is a comprehensive online platform designed to streamline the wedding planning process by offering a venue and vendor discovery and booking tool. It distinguishes itself as the first marketplace to provide true price transparency for weddings. Couples can easily search for, customize, and book their perfect wedding venue and vendors across North America without any upfront costs. Weddily's platform allows for swapping or upgrading vendor services, making it highly customizable to each couple's needs. Moreover, it connects users with a vast network of highly-rated venues and vendors, ensuring a wide range of choices.

Samewave
Updated the exsiting project
🔗 https://www.samewavesurftrips.com/login

Enhance the booking system's code for surf trips and add real-time chat functionality using `socket.io`, which includes setting up WebSocket connections and event listeners for messaging and user interactions.

Aligner
Developer

To improve front-end responsiveness, optimize your website's design for various devices using responsive CSS frameworks like Bootstrap. Ensure fast loading times by minimizing assets and using modern web technologies.

AppleJax
Developer
🔗 https://parents.applejax.com/

To improve front-end responsiveness, optimize your website's design for various devices using responsive CSS frameworks like Bootstrap. Ensure fast loading times by minimizing assets and using modern web technologies.
AppleJax is a online classroom.

ST-Market
Developer
🔗 https://stmarket.com/

To improve front-end responsiveness, optimize your website's design for various devices using responsive CSS frameworks like Bootstrap. Ensure fast loading times by minimizing assets and using modern web technologies.

STMarket is a forex and CFD broker, operating from both the United Kingdom and Cambodia, offering a diverse range of financial products and services. The platform allows trading on various assets including Forex, indices, commodities, and cryptocurrencies through popular platforms like MetaTrader 5. They emphasize security with segregated accounts and are regulated by the Securities and Exchange Commission of Cambodia, and also follow the financial regulations in the UK.

The company prides itself on offering low spreads and fast execution speeds, and provides tailored services to meet the needs of both individual and institutional clients globally. They support a variety of deposit methods and promote an educational approach to trading, offering resources and support to help clients improve their trading skills and knowledge.

Skills

HTML5
a coding language that structures and defines the meaning of web content
●●●●○

CSS3
a computer language for laying out and structuring web pages (HTML or XML)
